

# For Women Only!

Why worry  
if you have  
the right  
answer?

You may have  
heard of HPV,  
or human papillomavirus,  
a common infection.<sup>1</sup>

## But did you know ... ?

- Most adults have been infected with HPV at some time in their life.<sup>2,3</sup>
- HPV is the leading cause of cervical cancer.<sup>1</sup>

### The good news!

Cervical cancer is almost 100% preventable.<sup>1</sup>

women  
under  
30<sup>4</sup>

Get the  
right test,  
get the right  
answer  
for you!

women  
30  
or over<sup>4</sup>

- Regular **Pap tests** should be done.
- An **HPV DNA test** is not necessary since HPV may go away on its own.

- An **HPV DNA test following an abnormal Pap result** is recommended in order to get the right answer.
- Finding HPV may mean there is an ongoing infection that can lead to cervical cancer.
- Cervical screening is recommended for all women who are, or have been, sexually active.

Ladies,  
talk to your  
doctor about how  
and where you  
can get tested.

**CML HealthCare**

Care. Confidence. Comfort.
